SUMMARY

Data engineer with 6 years of experience designing large-scale batch and streaming data pipelines. Focused on building reliable, well-documented data infrastructure that analytics and ML teams can trust.

CORE SKILLS

Languages	Python, SQL, Scala
Data Platforms	Spark, Kafka, Airflow, dbt
Warehousing	Snowflake, BigQuery, Redshift
Cloud	AWS (S3, Glue, EMR), GCP

EXPERIENCE

Senior Data Engineer

Driftline Commerce — San Jose, CA

Jan 2022 - Present

- Own the core data platform ingesting 4TB of daily event data from web, mobile, and backend services.
- Redesigned the batch ETL pipeline using Airflow and dbt, reducing pipeline failure rate from 12% to under 1% and cutting daily processing time from 5 hours to 90 minutes.
- Built a real-time streaming pipeline with Kafka and Spark Structured Streaming that powers a fraud-detection model with sub-second latency.
- Established data quality monitoring across 150+ tables, catching schema-breaking changes before they reached downstream dashboards.

Data Engineer

Amberfield Analytics — San Jose, CA

Jul 2019 - Dec 2021

- Built a data warehouse migration from an on-prem MySQL cluster to Snowflake, enabling self-serve analytics for 40+ business users.
- Wrote incremental Spark jobs that cut nightly ETL compute cost by 42%.
- Partnered with the data science team to build reusable feature pipelines, cutting model feature engineering time roughly in half.

EDUCATION

San Jose State University

M.S. in Data Engineering

2017 - 2019

UC San Diego

B.S. in Computer Science

2013 - 2017

CERTIFICATIONS

- Snowflake SnowPro Core Certification
